

# CHAIN CONVEYOR

## USE

The chain conveyor is used for conveying of granular products. It is used to transfer in length products to be ensiled on processing towers, process machines and fast loads. It is indicated for all sliding products with variable capacities; it is reliable and hermetic.

## OPERATION

The product enters by gravity, a linear motion of the chain moves the product in the opposite side of the load and is released in an unloading hopper. The flow rate is given by the speed of the chain.
